

Understanding your Technology

Landscape for Future Technology Selection

Introduction

Having the right systems and technology in place and understanding future requirements to meet your business objectives is key to every organisation's success, no matter of size. Understanding your how your current systems meet business critical activities or where duplication occurs will allow you to identify potential improvements, reduce duplication and ensure your technology is working for you both now and in the future.

Incorrect IT infrastructures not only have an impact on processes and efficiencies, but also impacts an organisation's workforce capabilities to be able to meet their work objectives and reduce frustrations.

Who is it for?

This workshop is aimed at senior leaders or individuals in the organisation that have responsibility for the organisation's IT infrastructure or process management.

It is suitable for both SMEs who have previously completed a technology audit of their organisation, and wish to update this, or organisations who are new to this activity.

What will I get out of it?

This interactive workshop will walk you through tools and techniques you can use with example case studies to show these in action. You will also have the space to start to complete the mapping of the technology landscape within your own organisation.

Following the session, you will have the opportunity to have a follow up 1-2-1 discussion with the tutor to discuss your next steps.

Workshop structure

In this workshop you will firstly learn tools and techniques to map your current technology use, to identify gaps or possible duplication within your IT structure, and which systems are supporting business critical activity, from large complex systems, down to Microsoft Excel!

The second part of the workshop will focus on how you can identify and select suitable technologies to enable your organisation and digital transformation both now and strategically for future requirements.
